DEVOX OTIENO OMOLLO

Full-Stack Developer | DevSecOps | Security Reviewer

Ruiru, Kiambu, Kenya | +254 713 318 602 | devoxomollo@gmail.com

github.com/Omollodev | portfolio.devoxsec.com | devoxsec.com | LinkedIn | Bugcrowd: Th4_Hunt3r

PROFESSIONAL SUMMARY

Full-stack developer and security reviewer who builds software with Python (Django), React, React Native and Java on MERN and PERN stacks, ships it through Git, CI/CD, Docker and Kubernetes, and then tests it as an attacker would. Founder of DevoxSec Technologies, serving Kenyan SMEs, fintechs, SACCOs and startups. Active bug bounty hunter on Bugcrowd, working in OWASP Top 10 methodology with black-box and white-box testing of web applications and Android APKs. CCNA and CEH certified, with AWS certification in progress.

TECHNICAL SKILLS

- **Full-stack development:** Python (Django with Bootstrap, Flask), React, React Native with Expo and EAS, Node.js and Express, MERN and PERN stacks, JavaScript/TypeScript, Java (Spring Boot)
- **Databases:** MongoDB, SQL, PostgreSQL, MySQL, SQLite3
- **DevSecOps:** Git and GitHub, CI/CD workflow pipelines, Docker, Kubernetes, Linux (Kali), AWS and Azure
- **Security review:** black-box and white-box testing (web and Android APK), vulnerability assessment, OWASP Top 10 and OWASP IoT Top 10, CWE classification, SIEM (Splunk, Suricata), Burp Suite, Caido, Nmap, secure SDLC
- **Tools and practices:** Postman, JWT-based auth, REST APIs, VLANs and firewalls, Agile collaboration

PROFESSIONAL EXPERIENCE

Founder, DevoxSec Technologies — Ruiru, Kiambu, Kenya | 3 July 2026 to present

- Builds web and mobile software, sets up delivery pipelines and runs security reviews for Kenyan SMEs, fintechs, SACCOs and startups.
- Delivers full-stack projects with Django, React, React Native, MERN and PERN stacks and Java, and automates builds and releases with GitHub, CI/CD, Docker and Kubernetes.
- Carries out black-box and white-box security reviews with written findings ranked by severity and re-tests after fixes.

ICT Security Attaché, State Department for Wildlife — May 2026 to Jul 2026

3-month industrial attachment, completed per official recommendation letter.

- Supported the department's ICT team with day-to-day system and network security monitoring, assisting in the identification and escalation of potential vulnerabilities and access-control issues.
- Assisted in reviewing internal systems and workstations against baseline security configurations, documenting findings for the supervising ICT officer.
- Gained exposure to public-sector IT governance, asset handling and incident reporting procedures within a regulated government environment.

Security Consultant, then Security Researcher, KosamTech Technologies — Jan 2025 to Apr 2026

Progressed from Security Consultant to Security Researcher within the first year.

- Performed vulnerability assessments and manual penetration testing on client web applications and internal systems, mapping findings to OWASP Top 10 and CWE classifications.
- Developed and hardened full-stack MERN applications with security-first practices: input validation, JWT auth and dependency review.
- Contributed internal write-ups on vulnerability classes and remediation guidance for the consulting team.

Bug bounty and independent security research — Bugcrowd (Th4_Hunt3r)

- Active researcher on Bugcrowd, doing reconnaissance, vulnerability discovery and responsible disclosure on web applications and Android APKs.
- Maintains a personal web security testing lab (Docker, OWASP Juice Shop, DVWA, Burp Suite) for continuous practice against OWASP Top 10 classes.

- Builds and secures cloud environments (Docker, Kubernetes, AWS, Azure) to study container and cloud misconfiguration risks.

ICT Trainer, Adult Destiny School 2022 to 2024

- Taught Microsoft Office practice and basic computer studies.
- Received a recommendation letter on completion of the role.

SELECTED PROJECTS

- **Car Wash Management System** (React, Node.js, Express, MongoDB, JWT): live full-stack MERN application with customer registration, service tracking, payment processing and an admin dashboard.
- **Online Voting System** (Python, Django, Bootstrap 5, PostgreSQL): live voting system built for students at KCA University.
- **Bluebird Hotel Management System** (Python, Django, Bootstrap 5, HTML, CSS, JavaScript; PostgreSQL in production, SQLite3 in development): live hotel management application where guests make reservations online and assigned rooms receive room services after check-in.
- **Developer portfolio** (React, Vite, Vercel): portfolio.devoxsec.com, with light and dark themes and a CI, security-scanning and Dependabot pipeline on GitHub.
- **NutriScribe** (React Native with Expo and EAS, Flask, RESTful API): health monitoring system; budget plan prepared for the build.
- **Legacy Core Banking System** (Java, Spring Boot, MySQL, Thymeleaf): simulated core banking platform with account management, transaction processing, fund transfers and loan calculation.
- **SIEM Implementation** (Splunk, Suricata, Python): real-time intrusion detection with log analysis, alerting and a dashboard for security event triage.
- **Web Security Testing Lab** (Docker, Kali Linux, OWASP Juice Shop, DVWA, Burp Suite): containerized environment for practising exploitation and remediation of common web vulnerability classes.
- **Cloud Security Projects** (Docker, Kubernetes, AWS): containerized workloads deployed and hardened on AWS, applying orchestration and cloud-security best practices.

CERTIFICATIONS AND EDUCATION

- Cisco Certified Network Associate (CCNA)
- Certified Ethical Hacker (CEH)
- AWS certification (in progress)
- Diploma in Computer Science, Zetech University: expected completion 18 December 2026
- Targeting OSCP and CPTS
